MULBERRIES

Mulberry (*Morus sp.*) is a unique genus of flowering plants, found both in the wild and cultivated around the world under different agroecological conditions. One of its species, *Morus alba* (white mulberry), is favoured by silkworms, which use the tree's fruit for their daily diet. Mulberry fruits are rich in biologically active phytochemicals with strong antioxidant properties. These components, both in their pure form and as part of other medicines, have significant effects in the treatment of diabetes, inflammation, tumours, liver disease, hyperlipidaemia, nerve damage, and chronic diseases.

Our berries are grown high up in the PAMIR MOUNTAINS, in a crystal clear environment. They are hand-picked and naturally dried in a dry, fresh breeze.

Phytochemical composition

Recent studies on white mulberry (*Morus alba*) and black mulberry (*Morus nigra*) have found that these plants contain 35 phytochemical compounds, including phenolic substances and amino acids. These bioactive phytochemicals make mulberries an alternative functional food.

Nutrients

Mulberries have a sweet flavour (pH < 3.5) and are low in calories. The fruits are rich in carbohydrates, proteins, lipids, vitamins, minerals, and fibre, which contribute to a healthy diet.

Medicinal properties

Mulberries are rich in a variety of biologically active components that have beneficial therapeutic effects on health and well-being. Scientific studies have also demonstrated the therapeutic properties of mulberry extract as a food supplement.

BENEFITS OF OUR PRODUCTS:

SOURCE OF
VITAMINS

100 % VEGAN,
RAW

NO ADDED
SUGARS

LOW
